APK Installer - Apps on Google P

https://play.google.com/store/apps/details?id=com.apkinstaller.ApkInstaller

This demo shows how to install an app developed in Android Studio on a physical Android Device.

Note that this demo is for devices not marketed by Google Inc. (such as the Nexus and Pixel devices); for these devices, there is a separate demo labeled "How to Install an App on Google Devices"

This app is compatible with your device.

Add to Wishlist

Install

Prior to connecting your device to your computer via a data cable, you should download and install an APK Installer or APK Manager from the Google Play store onto your device.

I have downloaded and installed APK Manager onto my Samsung Galaxy Tab, which I will use for this demo.

APK Installer - the best app manager for Android. The redesigned APK Installer makes it easier to manage your Android Apps.

•App Installer

Batch install .APK files from internal storage or Secondary SD card.

You can now connect your device to your computer via data cable.
Once the device is mounted, you should see its file system on your computer screen.
In addition, the device should indicate it is in "USB Debugging" mode and/or that it is connected as a "media device" (my Galaxy Tab indicataes the latter).

Here is the APK file.
Type: APK File
Size: 1.57 MB
Date modified: 5/23/2019 11:06 AM
4 items
1 item selected 1.57 MB
At this point:
1. launch the APK Manager or APK Installer on your device
2. go to the Installer list in APK Manager, or Install APKs in APK Installer
3. tap on the app to install it. Your device will then ask you to allow Unknown Sources in the settings. Do so. For example, my tablet makes me change Settings > Security > Unknown sources
4. once your app is installed, open it. You can do this either from the APK Manager/Installer, or from the Android OS.
