

This demo shows how to install an app developed in Android Studio on a physical Android Device marketed by Google Inc. (such as the Nexus and Pixel devices).

For other devices not marketed by Google Inc., there is a separate demo labeled "How to Install an App on Android Devices"

*Prior to connecting your device to your computer via a data cable, you should download and install the Google USB Driver:
<https://developer.android.com/studio/run/win-usb.html>*

*The Google USB Driver is required for Windows only. If you're developing on Mac OS X or Linux, then you do not need to install a USB driver; instead, see:
<https://developer.android.com/studio/run/device.html>*

Once you have installed the drivers (if needed), connect the Google device via a data cable.

For this demo, I am using a Google Nexus 7 tablet.
